

## Activity sheet 12:

# npower Climate Cops Green Fingers mini greenhouse

A greenhouse traps the sun's heat and creates a warm home for plants to grow. Here is your chance to create your very own greenhouse for use on your windowsill at school or at home.

**You will need:** A large pop bottle, paper tissue / sugar paper, scissors and a seedling / plant in a pot.

### Instructions:

Before you start, make sure your bottle has been washed and is dry.

First cut the bottom off the bottle. You may need to ask for help because you should always be careful when using scissors. Don't cut off too much of the bottle because your plant will need plenty of room to grow.

Place your bottle over the top of your plant pot just to check it fits.

When you decorate your greenhouse make sure you do not cover it too much otherwise the sun will not be able to get in. Why not decorate your greenhouse with stick on paper butterflies or bees?

Once the decorations are dry, your greenhouse is ready to use. It's time to get growing!
