

Hercules - Superior Strength, Good Standard Features & Great Value!

The new Hercules range, available only from The Greenhouse People, has all the features that help create the perfect greenhouse environment. Of equal importance, the structure has been specially designed to withstand adverse weather conditions, especially the wind. **Standard features for added strength.**

Green Finish

With many greenhouses, you have to add an extra for green finish. However green finish is INCLUDED on these models as standard.

Plenty of ventilation

All these new Hercules models include lots of roof vents (all automatic) and a suitable number of louvre side vents.

Good quality downpipes

included. These full length pipes are included with every greenhouse and a 45 degree bend for you to easily run the down pipe into a water butt. A good range of extra bends and T pieces are also available.

Strong frame

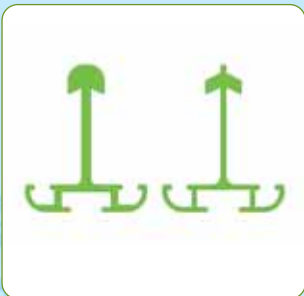

Hercules has more metal in the frame and has extra cantilever braces in the roof for strength. If you live in a windy area, Hercules is the greenhouse for you.

Large pane toughened glass

All the glass in these new Hercules models is toughened safety glass in large panes (i.e no overlaps).

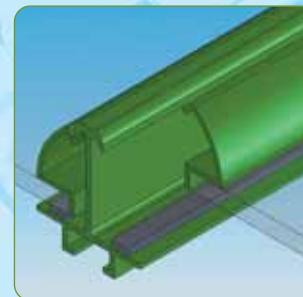

Kick panels

All around the bottom of the greenhouse there is an 18" high pane of toughened glass— the idea of this is that if you ever flirt a stone up from a lawnmower etc and break a pane it is small, easy and cheap to replace.

Extra strong glazing bars

included at gable ends; most greenhouses use the same glazing bars all around— but as the gable end glazing bars are longer they need to be stronger

Bar capping system

all glass is held in with full length PVC 'bar capping' - This eliminates the traditional greenhouse clips and is far neater and stronger in the wind.

Hanging basket rails

included: these full length rails are made from sturdy T-section and you can hang your baskets straight from them— making them easier to plant up and grow on.

Low level door threshold

Many greenhouses on the market have a step at the door which can be inconvenient. This new Hercules has a level threshold which is ideal for wheelchair or wheelbarrow access— and no step for you.

Good eaves height (5'5")

The extra height gives you a better atmosphere for your plants and more headroom for your plants—and for you!

Lockable door

This simple lock keeps the door closed in the wind and you can also lock it with a key if required.
